

Following instructions are based on the example of 2 channels, SIP account from 501 and 502 for SiSky's SIP Endpoints.

### Config Asterisk for SiSky (For Example: Asterisk without freePBX)

#### 1. Define SIP Extensions in file **sip.conf**

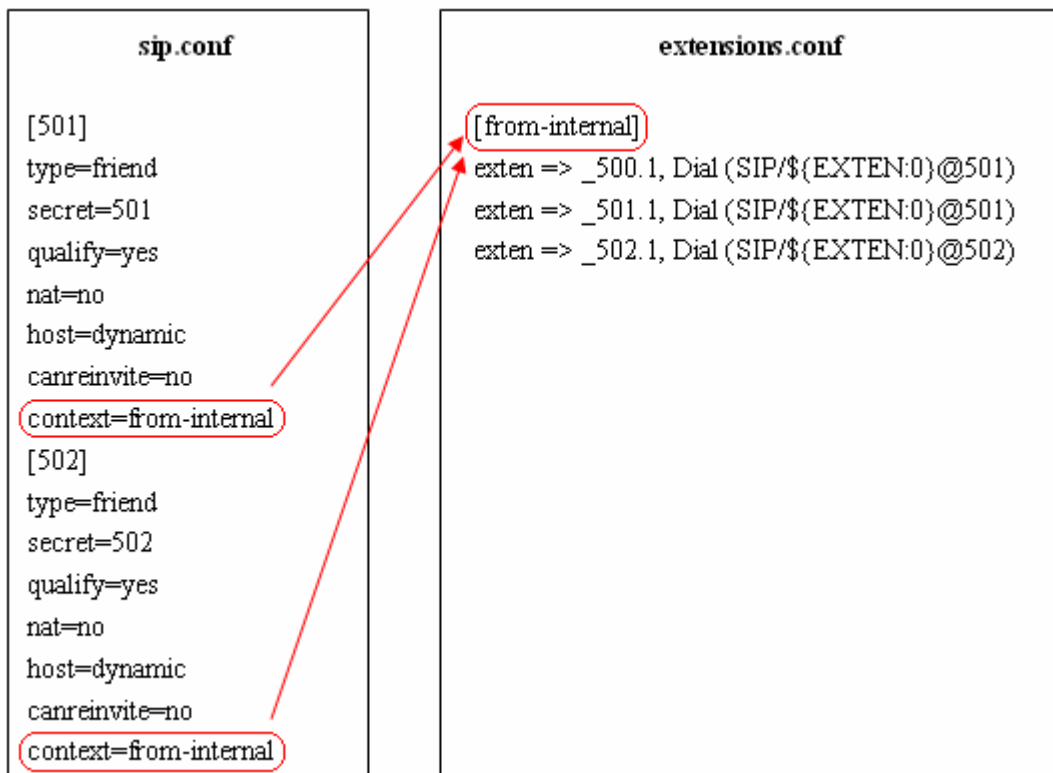

for example:

```
[501]
type=friend
secret=501
qualify=yes
nat=no
host=dynamic
canreinvite=no
context=from-internal
```

Set other extensions as same as setting extension 501.

#### 2. add below lines into file **extensions.conf**:

```
[from-internal]
exten => _500.1, Dial (SIP/${EXTEN:0}@501)
exten => _501.1, Dial (SIP/${EXTEN:0}@501)
exten => _502.1, Dial (SIP/${EXTEN:0}@502)
```

**2. restart Asterisk**

**Now you have successfully finished configuring Asterisk for SiSky Enterprise Edition. Next step you should Config SiSky's SIP Endpoints and Skype trunks.**
