**Bug Fixes**

- Fixed system issue: After resetting or rebooting TA gateway, TA gateway failed to boot properly.

---

**Firmware 47.0.0.36**

Date: December 24, 2018

**Optimization**

- Improved the system stability.
- Optimized NAT settings.
- Deleted GSM and added G729 to the default codec list on VoIP server.
- Added support for bulk editing **DID Number** and **From User** for FXS ports.
- Changed the default **Keep Alive Interval** setting to 60 seconds.
- Changed the default **Default Incoming/Outgoing Registration Time** setting to 1800 seconds.
Bug Fixes

- Fixed Auto Provisioning issue: The firewall on TA gateway could not work if the TA gateway was auto provisioned by Yeastar S-Series VoIP PBX.
- Fixed the issue that if **MWI Light Option** was set to **neon**, the phone could not light up when a voicemail was received.
